

How does the chatbot work?

1. The chatbot first extracts text from the PDF.
2. It then generates embeddings for the text, converting each page into a vector representation.
3. When you ask a question, the chatbot compares the question's embedding to the text embeddings, finding the best match.

What is the purpose of this chatbot?

1. The chatbot helps users extract information from a PDF using natural language queries, providing the most relevant content based on the question.
